

Bone Pathologies

Day 1

You will be creating an informational flyer to be distributed in the community. Your goal is to highlight your assigned bone pathology to bring awareness to the issue. Your bone pathology flyer should include the following:

What is it?

What causes it? How does it happen?

Risk factors

Symptoms

How many get it?

Who is more likely to get it?

Treatment

Prevention

Anything else that you think is interesting

Actually pretend you are distributing this flyer to the community and make it look good!

Day 1 should include a lot of research, gathering data, and organizing data before the flyer is started.

Day 2

You will be creating a 30-60 second commercial (video) attempting to get donations for research and treatment for people afflicted with your bone pathology. This commercial should include some of the basic information about the pathology from Day 1.

Actually pretend you are truly trying to get donations through this commercial and make it look good!

Each student will be given a certain amount of money to donate to whichever commercial they thought was best. The student with the most donations wins.
